PROFESSIONAL SUMMARY

Bachelor's degree in Computer Science and Technical Degree in Computer Maintenance and IT Support. Experience in academic and personal projects involving backend and frontend development, process automation, web scraping, virtualization, and systems monitoring. Interested in working in software development, automation, infrastructure, and DevOps.

EDUCATION

Bachelor's Degree in Computer Science, Federal Institute of Minas Gerais. Completed in July 2025

Technical Degree in Computer Maintenance and IT Support, Federal Institute of Minas Gerais. Completed in March 2016

TECHNICAL SKILLS

- Programming Languages: Python, Java, C, C++, Bash, Dart, Haskell, JavaScript, Prolog, Swift, TypeScript, PowerShell.
- Frameworks & Tools: Spring Boot, Flutter, React, Angular, Vue.js, Selenium, Scrapy, Dash Bootstrap, Apache Airflow, Docker, Postman, Git/GitHub, Kubernetes.
- Databases: PostgreSQL, MySQL, SQL Server, Firebase, MongoDB.
- Infrastructure & Virtualization: Proxmox, VMware, Oracle VirtualBox, UTM, Zabbix, SSH.
- Other: REST APIs, HTML, CSS, Zenity.

LANGUAGES

- Portuguese: Native
- English: Basic
- Spanish: Basic

ACADEMIC AND PERSONAL PROJECTS

REST API for E-commerce (Java, Spring Boot, PostgreSQL)

Development of a REST API for managing products and orders in an e-commerce system, applying best practices in software architecture, layered design, and relational database integration.

React Frontend for E-commerce

Development of a responsive web interface to consume the Java-based API, enabling product browsing, search, and shopping cart management.

Angular Web Platform for Resume and Certificates (Angular, GitHub Pages)

Development of an Angular web application to showcase a professional resume and certifications, featuring a responsive layout and static deployment using GitHub Pages (github.io).

Flutter Mobile App for Personal Trainers

Mobile application designed to assist personal trainers in collecting students' body measurements, calculating BMI and BMR, and automatically generating PDF reports.

Task Scheduler with Graphical Interface (Bash, Zenity, Cron)

Development of a graphical interface for managing scheduled tasks via cron, using Zenity to provide a user-friendly interaction.

Folder Encryption System (Bash, AES-256)

Implementation of a tool to encrypt and decrypt folders using AES-256 symmetric encryption, with a graphical frontend built using Zenity.

Facial Recognition System (Python, OpenCV, MTCNN, Keras-Facenet, NumPy)

Implementation of a facial recognition system with face detection and embedding extraction, using computer vision and deep learning libraries.

Marketplace Web Scraping (Python, Selenium, Scrapy)

Automation of data collection from Counter-Strike skin marketplaces, extracting information directly from HTML elements and storing it in a structured format.

Raspberry Pi Monitoring with Zabbix

Configuration of remote monitoring for Raspberry Pi performance and system metrics using Zabbix, including custom triggers and dashboards.

Virtual Machines and Containers Management with Proxmox

Creation and administration of virtualized environments for studying distributed systems, including deployment, management, and monitoring of virtual machines and containers.

Distributed Systems with JGroups (Java)

Development of a client-server architecture using JGroups, enabling communication, coordination, and message exchange among multiple nodes in a distributed environment.

UNO Card Game in Prolog

Implementation of an interactive UNO card game in Prolog, allowing the user to play against the computer while following the basic game rules.
