PROFESSIONAL SUMMARY

I began my journey in the technology field through a Technical Course in Computer Maintenance and Support, during which I worked as an intern at my city's city hall and later as an IT Technician. During this period, I gained hands-on experience in technical support, infrastructure, system maintenance, and configuration, building a strong professional foundation and practical experience.

At the same time, I started my undergraduate studies in Computer Science, completing the program and earning a Bachelor's degree in the field. Throughout my academic journey, I strengthened both my theoretical and practical knowledge, always driven by curiosity and a desire to understand how technologies work. My affinity for problem-solving and continuous learning naturally guided me toward the field and toward a constant pursuit of new technologies, aiming to grow professionally and build a solid career in computing.

ACADEMIC BACKGROUND

- **Bachelor's Degree in Computer Science**, Federal Institute of Minas Gerais. Completed in July 2025.
- **Technical Course in Computer Maintenance and Support**, Federal Institute of Minas Gerais. Completed in March 2016.

LANGUAGES

- Portuguese: Native
- English: Basic
- Spanish: Basic

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript/TypeScript, C, C++, PHP, Bash

Backend and API Development: Spring Boot, REST APIs, integration with relational and non-relational databases.

Frontend and Mobile: React, Angular, Flutter, Vue.js.

Automation and Data Processing: Selenium, Scrapy, DOM parsing, structured data extraction.

Databases: PostgreSQL, MySQL, SQL Server, SQLite, MongoDB, Firebase.

DevOps, Containers, and Infrastructure: Docker, Kubernetes (Minikube), Proxmox VE, VMware, VirtualBox.

Monitoring and Tools: Zabbix, Git/GitHub, Postman, SSH.

Operating Systems: Windows, Linux, macOS.

SUMMARY OF ACADEMIC AND PERSONAL PROJECTS

Development of projects in the areas of automation, backend, frontend, infrastructure, and distributed systems. Experience with web scraping using Python, Selenium, and Scrapy, performing DOM parsing and structured data extraction. Built a REST API for an e-commerce application using Java, Spring Boot, and PostgreSQL, integrated with a React frontend and an Angular application, with deployment carried out via GitHub Pages.

Hands-on experience with containerization and orchestration using Docker and Kubernetes, running the Docker Voting App on a local cluster with Minikube, as well as experience with virtualization using Proxmox VE. Developed a facial recognition system in Python (OpenCV, MTCNN, and Keras-Facenet), monitored Raspberry Pi devices with Zabbix, created a mobile application in Flutter with PDF generation, and developed automation tools in Bash (AES-256, Zenity, and Cron). I also implemented a UNO card game in Prolog, applying concepts of declarative modeling and logic programming.

CERTIFICATES AND PROJECTS – DETAILED INFORMATION

To access complete information about my certificates and developed projects, please visit my page published on GitHub Pages (github.io), where I keep all materials organized and regularly updated.
